

steel research international

Online ISSN: 1869-344X

Hot Topics

- *High Speed Forming*
- *Interstitially Alloyed Steels*
- *Recent Developments in Stainless Steels*
- *Locally Strengthened Steel Components*
- *Electromagnetic Processing of Metals*
- *Steels for Automotive Applications*

Aims and Scope

Steel Research International is a journal providing a forum for the publication of high-quality manuscripts in areas ranging from process metallurgy and metal forming to materials engineering as well as process control and testing. The emphasis is on steel and related metals and on materials involved in the processing, such as refractories and slags. Examples are given as follows:

Keywords: Process metallurgy, direct reduction, ironmaking, steelmaking, special metallurgical processes, secondary metallurgy, process simulation, sustainable steelmaking casting, near-net casting/shaping, hot rolling, cold forming, forging, drawing, mechanical properties, phase transformation, fatigue, creep, corrosion, heat treatment, welding/joining, machining, materials testing, numerical simulation

Steel Research International welcomes manuscripts describing basic scientific research as well as industrial research. The journal is listed in the Science Citation Index and has an Impact Factor of 1.118 (2015 Journal Citation Reports).
